

STRAIGHT EDGES & LEVELS

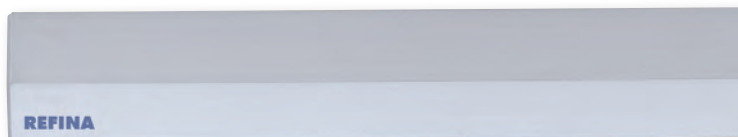

- full range of shapes & sizes
- for levelling & ruling off
- plaster & render
- floors & walls
- I beam for scraping & levelling render

The trapezium profile feather edges and box section rules are produced from precision aluminium extrusions and have plastic end caps

They are for finishing and levelling plaster and render, wall and floor surfaces. They help to identify hollows and high spots before sponging and trowelling up

The h profile feather edge is often used with projection plasters

The I profile aluminium straight edge is used for scraping back polymer and colour through renders, improving the flatness and uniformity of the scraped finish
